

Welcome to Pro DG!

Short User Guide to Pro DG beta testing release 0.4

Contents:

1. Installation
2. First start
3. Regular use of the program
4. Changing Ship profile
5. Changing excel template
6. Troubleshooting
7. Feedback

1. Installation

Once received an archive with the program, extract all the files to any folder on your computer / external drive / usb flash at your convenience.

You may create a Shortcut to the folder or execution file ProDG.exe on desktop.

The Pro DG is now ready for its first start.

Note! MS .NET Framework 4.5 or later version required to run Pro DG. If not installed, notice will be given with the offer to download it.

Note 2! Confirmed running under Windows OS only.

2. First start

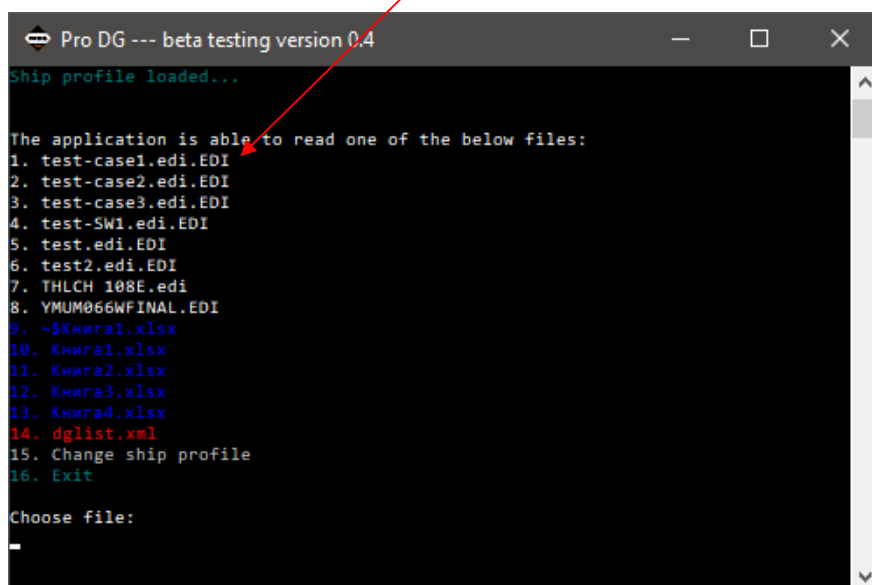

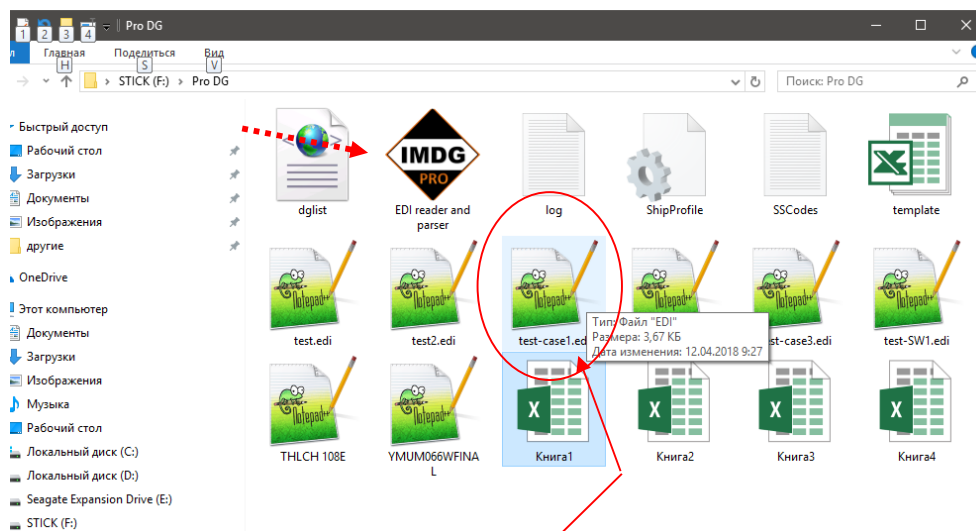

On first start you will be asked to create your ship profile. That operation may take some time and will require some detailed information of your ship, such as number of bays, rows, location of hot spots, permitted cargo according to DOC, etc.

If profile is not set, then 'default' ship will be used. That will definitely affect the result.

Ship profile can be set or changed any time later.

3. Regular use of the program

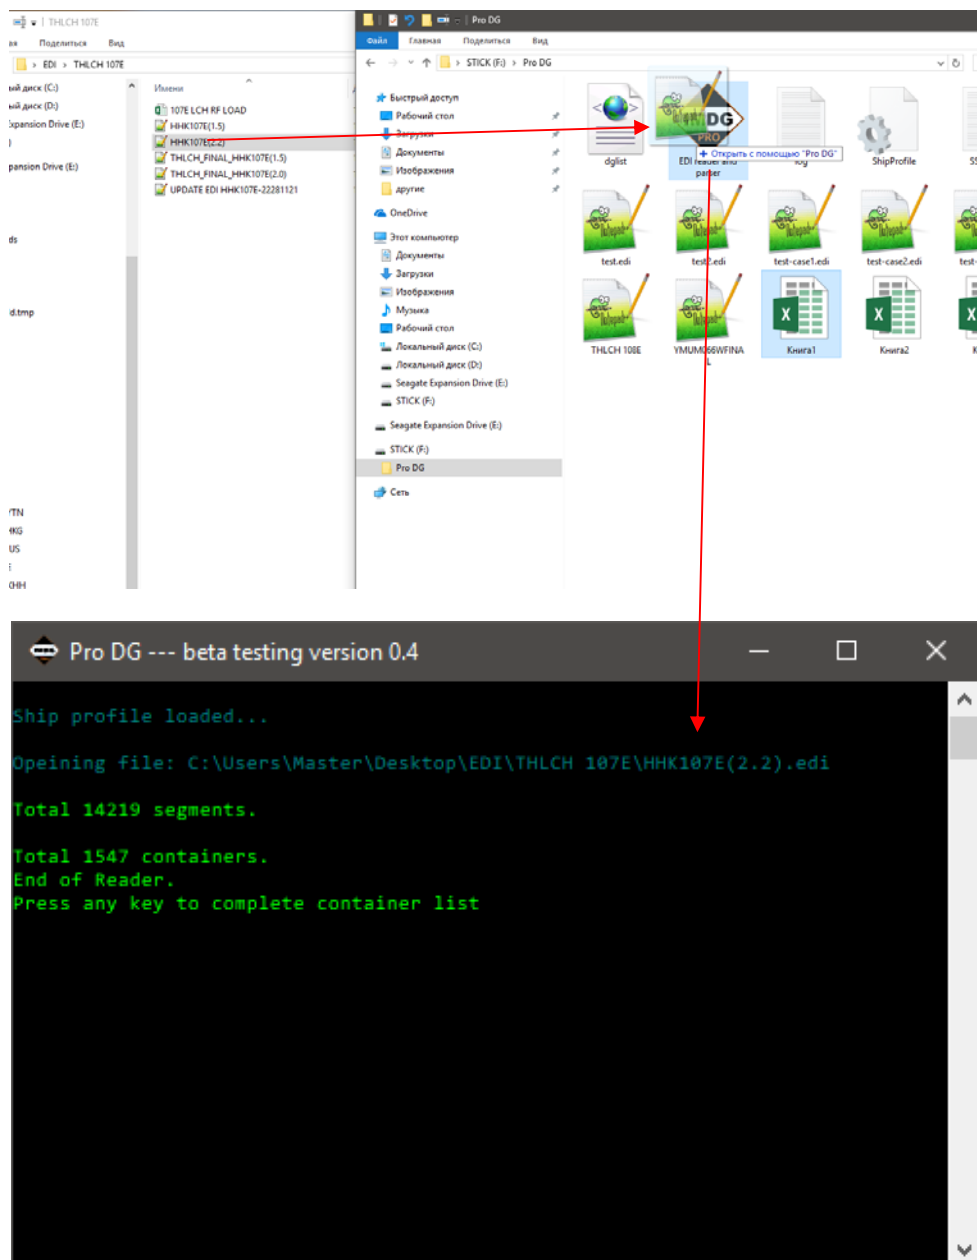

Run the ProDG.exe application. All readable files (.xls, .edi) located in the same folder will be listed. Just choose a file (type its number) to open.

!The file has to be placed into the same folder with the program before starting it.

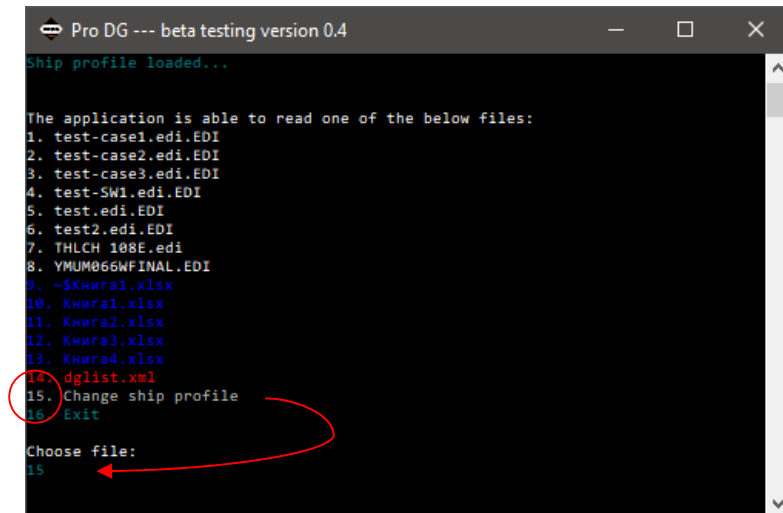

Or, choose any readable file from any location, select it, drag and drop onto the application icon. The program will start reading selected file automatically.

4. Changing Ship profile

Use application icon to run it. In the list of files option one before the last will be to change ship profile. Type it number and press 'Enter'.

```

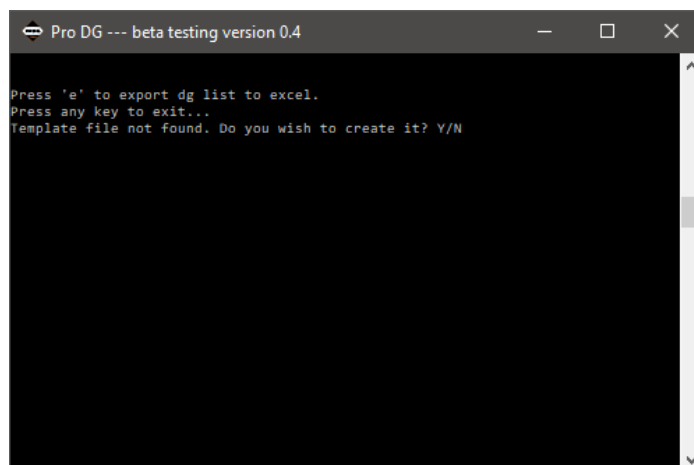

Pro DG --- beta testing version 0.4
Ship profile loaded...

The application is able to read one of the below files:
1. test-case1.edi.EDI
2. test-case2.edi.EDI
3. test-case3.edi.EDI
4. test-SW1.edi.EDI
5. test.edi.EDI
6. test2.edi.EDI
7. THLCH 108E.edi
8. VMUM066WFINAL.EDI
9. ~$Kwura1.xlsx
10. Kwura1.xlsx
11. Kwura2.xlsx
12. Kwura3.xlsx
13. Kwura4.xlsx
14. dglist.xml
15. Change ship profile
16. Exit

Choose file:
15
  
```

5. Changing excel template

First time opening or exporting an excel file you will be offered to create a template to use with excel (press 'Y' to confirm). Later, when template is created, it will be loaded automatically, and can also be changed any time.

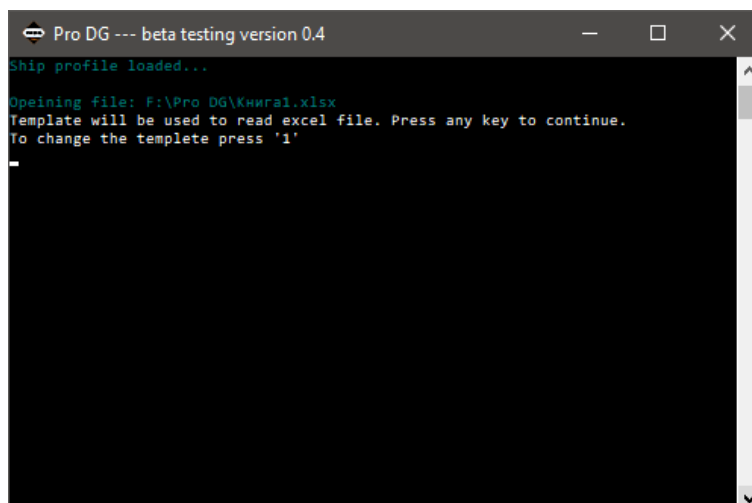

```

Pro DG --- beta testing version 0.4

Press 'e' to export dg list to excel.
Press any key to exit...
Template file not found. Do you wish to create it? Y/N
  
```

When opening an excel file or exporting dg list, on confirmation screen press '1' to change the template for excel.

6. Troubleshooting

If you experience any troubles with “Pro DG”, please, gather maximum information of your problem, including .edi or .xls file causing problem and send an e-mail to:

feedback@imdg.pro

7. Feedback

Any good suggestions, or bad experience, problems, questions, mistakes and findings you are most welcome to share with the development team by sending us an e-mail to:

feedback@imdg.pro

The most useful and frank feedbacks and most active users will be granted with a commercial version for free.
